Subject: Re: GENWAL 1st quarter EDI issue

Hi Erik,

Sounds like it won't be a problem since it was a lab error and Horse Canyon water quality has not been an issue in the past. I'll let Dana know (she has to clear it).

Did you still need to discuss access to Little Bear Canyon? I wasn't sure where we left that. Let me know what you have decided.

Steve

Steve,

I have been finishing the 1st quarter EDI for GENWAL. Unfortunately, I discovered today that the lab (CT&E/SGS in Huntington) did not analyze the Horse Canyon Creek sample (28 March 2005) for TSS or for settleable solids as we requested. I don't know why they didn't analyze for those parameters. When I asked them about it they said that they made an error marking their internal chain-of-custody form and the TSS and set. solids Somehow got left off. I asked if they still had the sample to see if they could run an expired sample, but unfortunately the sample was dumped last week.

I noted in the EDI comments that the creek water was clear when sampled. Actually, the water was running over snow and ice and was absolutely clear as I recall.

I would appreciate it if you could OK the EDI for the Horse Canyon Creek sample so we can get the EDI finalized. Let me know if you have any questions or if we need to do anything else.

Thanks,
Erik
